Simran Onboarding Bot: Questions for the Founder

Decisions needed before the production build. Where I have a default it says **Suggested**; I will use it if there is no strong preference.

Where and who

QUESTION	OPTIONS AND MY SUGGESTION	FOUNDER'S ANSWER
1 How does the user meet Simran, and on which platforms?	A) Auto-starts as a full-screen voice call on first launch, with a Skip button B) A card on home the user can accept **Suggested:** A. Which platforms: Android, iOS, web?	
2 Is Simran an in-app account (profile, can post, comment, join rooms) or only an onboarding assistant?	She currently promises "I will listen to your song and comment". **Suggested:** keep the promise only if she really will comment; otherwise we remove it.	

After the call

QUESTION	OPTIONS AND MY SUGGESTION	FOUNDER'S ANSWER
3 After the duet or recording handoff, does she message again?	A) Never B) One follow-up after the first duet or post C) Ongoing **Suggested:** B, in-app, not a push.	
4 Can the user call Simran again later? From where, and how often?	A) One time only B) "Call Simran" button with a limit **Suggested:** B, and she remembers them.	

Backend, data and goals

QUESTION	OPTIONS AND MY SUGGESTION	FOUNDER'S ANSWER
5 Are the 50 welcome coins really credited? Who credits them, and when?	She says it out loud, so it must be real or we change the line.	
6 Who gives us APIs for live duet rooms, coin credit, deep links and the user ID?	Today these are mocks. We need one backend contact.	
7 What profile data do we store, where, and do we show a consent notice and age gate?	Name, city, job, taste and so on. Voice goes to Google Gemini. Needs legal review (DPDP Act).	
8 What is success, and what are the volume and cost limits?	Duet joined, recording posted, Day 1 retention. New users per day and max cost per call.	

Today the live conversation, profile capture and handoff work in the lab. Coins, duet rooms and user storage are still mock.
